How this report is worked out

Students are those on this practitioner's caseload over the days chosen, and any they recorded an observation of. Observations recorded and goals written count only what this practitioner did.

Last observed is when anyone last recorded an observation of the student, so a gap shows whoever it belongs to.

A goal is under way once its target is set, until it's completed. It's Behind when its latest value falls short of its expected path.

It's the same report a team administrator makes of this practitioner in Blume Admin, and the practitioner makes of themselves in Blume Notebook.
